VI - CONCLUSIONS AND RECOMMENDATIONS

The opinions of Cresap, McCormick and Paget regarding the Special Study's section on floor trading were expressed in the preceding chapter. This chapter is confined to the conclusions and recommendations resulting from Cresap, McCormick and Paget's own study.

Following an introductory statement outlining the approach taken by Cresap, McCormick and Paget are sections on recommended rules, general surveillance procedures, and general recommendations.

INTRODUCTORY STATEMENT

Drawing conclusions from this study and formulating recommendations represent a grave responsibility, because, at this stage of the controversy between the SEC and the Exchange, irreparable harm could come to the auction market from failure to devise an effective means of employing, to beneficial ends, the speculative risk-taking talent and capital on the Floor and within the member firm group. These recommendations propose to convert into a positive and constructive function the activities of members and member firms who now engage in speculative risk-taking and to retain the mobility of their capital. To differentiate them from other members and their functions, they might be designated as "registered dealers" (or some other appropriate term).

From a practical aspect, successful implementation of the plan will result in loss of some of the prerogatives heretofore enjoyed by some members and member firms. On the other hand, making constructive use of the group engaging in speculative risk-taking, under suitable standards of performance, should materially assist in maintaining continuity and stability of prices, and thereby provide support to the specialists when their particular stocks are subject to a major imbalance of supply and demand. Investors in general, as well as the Exchange, its members and member firms, should benefit substantially over the long term.

 Minimum "registered dealer" trading capital as established by the Exchange to ensure adequate performance of the function.

b. Any member organization and any individual member should be eligible to establish a "registered dealer" account, provided the above qualifications are met, including the capital requirements over and above those required for the member's or member organization's other activities.

> No organization which carries customer accounts should be permitted to establish a "registered dealer" account, unless the Exchange has previously investigated and approved the regular order handling and order supervision procedures of the organization in question as providing adequate protection for public orders and for fair and orderly markets.

Explanation

A strong correlation exists between the capital resources of traders and their likelihood to perform a constructive dealer function.

Potential conflicts of interest between the "registered dealer" activity and the servicing of public orders should be eliminated insofar as is practical. On the other hand, the legitimate trading activities of members and member firms representing the public should not be curtailed, and the largest possible amount of constructive risk-taking capital should be channeled into the "registered dealer" activity. Commission firms that now trade regularly for the firm account are careful to put their customers' interest ahead of their own, and their trading activities are the collective responsibility of the principals of the firms.

c. "Registered dealer" accounts should be required to meet minimum performance standards for the securities in which they deal.

- A standard of performance in stabilizing transactions, i.e., a percentage of volume against the trend as measured by the straight tick test, which would be established by the Exchange to ensure adequate accomplishment of the "registered dealer" function. This standard should be met or exceeded by the "registered dealer" account on a biweekly basis and should apply to all transactions effected for each "registered dealer" account. Also, with the objectives of improving the function, the standard might be changed in the future, as experience is gained in the conduct of "registered dealer" operations.
- If the performance of a "registered dealer" in any one security falls substantially below standard, an investigation should be undertaken by the Exchange.

Explanation

Statistical studies disclose that present floor trading tick test scores fall mainly within the range of 40 per cent to 60 per cent. Furthermore, the most active and most highly regarded floor trading accounts are those that generally achieve the highest scores. Once the "registered dealer" category is established, only those who demonstrate an ability to act in a constructive manner should be permitted to retain their registration. An initial minimum standard of 60 per cent stabilization, as measured by the straight tick test, appears to be feasible and realistic.

- Additional and improved standards should be devised to evaluate "registered dealer" performance, including participation in difficult market situations, delayed openings and block transactions.

d. Failure to maintain performance should subject "registered dealers" to appropriate disciplinary measures, including suspension of registration as warranted,

e. Failure to maintain minimum capital required for the "registered dealer" account should result in suspension of registration, unless investigation by the Exchange reveals mitigating circumstances.

2. The following rule governing "registered dealer" accounts, is recommended:

a. All purchases effected for "registered dealer" accounts, whether on the bid or on the offer, should be limited to prices below the previous day's high, except:

- On minus or zero-minus ticks
- To close out or reduce short positions
- For bona fide arbitrage
- To correct a transaction made in error.

Explanation

Many floor traders presently participate constructively in many difficult market situations. Their performance appears comparable to that of the best of the specialists on such occasions. "Registered dealers" should be expected to meet those standards not subject to direct quantitative measurements but nevertheless recognized among floor professionals as essential to a constructive dealer function.

One of the effects of requiring a stabilization performance will be an over-all upgrading of "registered dealer" performance. In addition, if their capital is to be utilized in the most constructive way, they should be given greater latitude in the conduct of their trading. Establishing the previous day's high as the point above which purchases are limited to minus and zero-minus ticks recognizes the need for this greater latitude and yet is designed to prevent "registered dealer" activity from exerting undue upward pressure on the price of a stock or stocks. Purchases to cover short positions should remain unrestricted because, in effect, they are a liquidation of a short position and should be governed by the same principle as sales from a long position.

Data 103

b. If, in the opinion of the Exchange, price behavior of a stock has made the previous day's high unrealistic as a limit, then the limit should be reduced to the previous day's close.

(3) To ensure that public orders will receive the full preferential treatment to which they are entitled, the following rules are recommended:

a. No bid or offer, or response to a bid or offer, originated on the Floor by a member (or on an order originated off the Floor by such member on a day during which that member has been on the Floor) for an account in which such member has an interest, shall be entitled to parity based on time or price with or precedence based on size over, a public order.

> - Specialists and odd-lot dealers, when dealing in stocks in which they are registered, should be exempted from the provision of this rule.

b. A public order shall enjoy the same preferential treatment, as in (3a) above, in the specialist's book.

c. Every order subject to (3a) above shall be clearly designated as a "member order" when sent to the Floor, when left with a specialist or when given to another broker.

Explanation

There are occasions when, due to unusual activity in a given stock, the Exchange may find it expedient to exercise its discretion on trading price limits in the interest of maintaining an orderly market

۰Ĵ

An NYSE member who operates on the Floor of the Exchange has certain advantages over off-floor members and the investing public, in executing orders for his own or firm account. Present NYSE Rule 108 lessens the advantage of the Floor, and this recommendation is patterned on that Rule but expands its scope with the objective of further equalizing member trading conditions in the interest of making "registered dealer" activities a fully constructive force.

- **S**

1 - E

18.-H

- 63 - 63

4. No member (other than a specialist or an odd-lot dealer, in the stocks in which they are registered, or a "registered dealer") may initiate or effect a transaction, while on the Floor, for an account in which the member has an interest except:

- To correct a transaction made in error
- In the event a floor official has expressly invited buying or selling to assist in a difficult market situation such as a delayed opening, a reopening or the execution of a large order.

5. NYSE Rules 108, 109 and 110 (together with the clarification, interpretation and instructions to these rules) should be revised to conform with the concept and intent of the foregoing recommendations.

Explanation

The previous recommendations include rules to govern the activities of the "registered dealer." Those in this section are recommended to limit the activity of nonregistered members when making transactions for their own account.

RECOMMENDATIONS ON TRADING SURVEILLANCE

To implement the proposed program for "registerered dealer" operations requires improved selfregulation and surveillance of floor operations, and therefore the following recommendations are made:

1. The requirements for member reporting of transactions for their own or organization account should be specified in detail and brought to the attention of all members and member organizations. Adherence to reporting requirements and a review of accounting procedures for reporting should be a regular part of NYSE's periodic audits of member accounts.

2. The Exchange should establish the qualitative and quantitative standards of performance required of the "registered dealer."

3. The Exchange, in connection with its current review of organizational structure, should consider what steps are necessary for improvement of the procedures for making, adoption and implementation of rules relating to floor transactions and the operations of "registered dealers," and the surveillance of such operations.

GENERAL

RECOMMENDATIONS

1. The Exchange should initiate a program of internal education to ensure that all members understand the changes which are adopted by the NYSE, together with the reasons for the changes. This program should be directed to members, allied members and registered representatives of member firms.

2. The Exchange should initiate a research program aimed at quantifying the concept of price "stability" and at developing additional trading rules in the interests of fair and orderly markets.

3. The Exchange should examine and recommend to the Federal Reserve System margin requirements appropriate for the "registered dealer" function. MARKING

13.	Commission broker A bids 91 for 2,000 shares of ZYX, 1/4 point below the last transaction and 2 points below the preceding close. Simultaneously, commission broker B offers 1,500 shares long (public order), commission brokers C and D each offer 500 shares long (public orders), and floor trader X offers 2,000 shares long (from own account) - all at 91.						
	Under existing rules, who is entitled to sell?						
	a. B and either C or D (settled by toss)	73	15	48	1	11	24
	b. B and either C or D or X (settled by toss)	10	4	9	-	1	3

39

b. B and either C or D or X (settled by toss)
c. B and X toss; if B wins, X. C and D toss
d. X

Do you consider the existing rules governing this transaction fair to all concerned? Why?

A significant number of members do not feel it is fair that X is entitled to sell. Their comments indicate that they feel the public should come first at all times.

31

An equally large number of replies stated that, in many similar situations, floor traders have voluntarily stepped aside and either have given the public orders preference or have reduced their offer so that the order was divided among the group.

14. We would like you to indicate how floor trading activity has affected the market in certain situations which you yourself have observed on the Floor over the past 24 months.

Listed below are 9 market situations. In each situation where you have observed floor trading activity, please indicate whether floor traders were usually buying or usually selling (or both) and whether - based on what you saw happen - this floor trading activity has usually helped or hurt fair and orderly markets, (or both).

If you observed floor trading, but could not determine whether it helped or hurt fair and orderly markets, please check the appropriate "Could not say" column. If you cannot recall observing any floor trading for a given situation, check the "Did not observe" column for that situation.

	trading only in a,	a partícular stock? Yes				Ŧ			

If "Yes" or "Depends on circumstances," please specify which circumstances:

The circumstances most often specified were those in which a stock is fluctuating wildly and the Governors feel that floor trading would tend to accentuate the movement.

ELEVEN WALL STREET

NEW YORK 5, N. Y.

MENRY M WATTS, JR Chairman of the Board

XIGNINGON

December 19, 1963

DETERMINED TO BE AD ADMINISTRATIVE MARKING E.Q. 12065, Section 6-102

L- NARS. DALA_12/0

TO: All Members of the Exchange

SUBJECT: Questionnaire on Floor Trading

As you know, the Exchange has retained the management consulting firm of Cresap, McCormick and Paget to make an independent study of Floor Trading. This firm has been actively engaged in studying trading statistics, the SEC study and other reports. They have also observed operations on the Floor and interviewed members and others.

The firm has found that it is impossible for them to interview personally every member in the time they have been given to prepare their Report. Since they would like to have the opinions of all members, however, they have prepared the enclosed questionnaire in which they would like you to express your views on Floor Trading confidentially.

It is urgently requested that you answer this questionnaire as completely as possible, and return it unsigned in the enclosed envelope not later than December 30. Your cooperation in this matter will expedite the study and enable our consultants to do a more thorough job.

Henry hu Walls fr.

Enclosure

- OWN YOUR SHARE OF AMERICAN BUSINESS -

CONFIDENTIAL SURVEY OF MEMBERS OF THE NEW YORK STOCK EXCHANGE ON MEMBER TRADING FOR THEIR OWN OR THEIR FIRM'S ACCOUNT

INTRODUCTION

As Mr. Watts pointed out in his letter, this is your opportunity to express your thoughts anonymously and in complete confidence. When you mail this questionnaire to us, it becomes our property and no one connected with the New York Stock Exchange will ever see it.

We wish we could talk with all of you, because those members with whom we have talked have been most helpful. However, in the time available we must rely on this questionnaire to get your opinions and ideas.

Some of your fellow members have aided us in making sure that this questionnaire is clear and practical, and will provide answers which will materially assist us in our work.

In addition to the questions, space is provided for any additional comments you may wish to make.

Please return the enclosed questionnaire UNSIGNED in the enclosed envelope no later than MONDAY, DECEMBER 30, 1963.

If you have any questions, please call Mr. J. W. O'Reilly or Mr. T. E. Jensen, of the Floor Department.

Thank you for your assistance.

Yours very truly,
